Patent No. 6111090
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Gorman, Daniel M.
APPLICANT: Zlotnik, Albert
TITLE OF INVENTION: RAMMAIIAN CELL SURFACE ANTIGENS; RELATED TITLE OF INVENTION: REAGENTS
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                       MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 7, App

Patent No. 6111090
GENERAL INFORMATION:
APPLICANT: Gorman, Daniel M.
APPLICANT: Gorman, Daniel M.
APPLICANT: Zlotnik, Albert
TITLE OF INVENTION: MAMMALIAN CELL SURFACE ANTIGENS; RELATED
TITLE OF INVENTION: REAGENTS
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSEE: DNAX Research Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOFTWARE: Patentin Release #1.0, Version #1.30

No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 2, A

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, A

                                                                                                                                                                                                                                                                                                                                                                          (66)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Application US/08997897C

Patent No. 6114514

GENERAL INFORMATION:
FAPLICANT: SRIVASTAVA, RANJANA

APPLICANT: SRIVASTAVA, RANJANA

APPLICANT: SRIVASTAVA, BRAHM SHANKER

APPLICANT: SRIVASTAVA, BRAHM SHANKER

APPLICANT: SRIVASTAVA, BRAHM SHANKER

APPLICANT: SRIVASTAVA, BRAHM SHANKER

APPLICANT: SIVASTAVA, BRAHM SHANKER

APPLICANT: OF INVENTION: WYCOBACTERIUM TUBERCULOSIS SPECIFIC DNA FRAGMENT

FILE REFERENCE: U011469-7

CURRENT APPLICATION NUMBER: US/08/997,897C

CURRENT FILING DATE: 1997-12-24

NUMBER OF SEQ ID NOS: 7

SECTWARR: PALENTIN Ver. 2.0

SEQ ID NO 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 559;
